

1500 LB Swivel Jack

⚠ WARNING

Read and understand all instructions before installing, operating, or servicing this jack. Failure to follow these instructions can result in serious injury or death. Retain these instructions for future reference.

OPERATION

⚠ WARNING

Before each use, verify that the pull pin is fully engaged in the swivel plate. Operating a swivel jack without the pin completely engaged may cause the trailer tongue to drop suddenly, which can result in serious injury.

When the jack reaches either the fully extended or fully retracted position, do not force the handle, as this may damage the jack.

When moving the trailer by hand, crank the jack to its lowest position. Do not use the jack as a handhold.

Avoid rolling the jack over rough or soft surfaces.

Before towing, pivot the jack into the horizontal position and ensure the swivel handle is fully engaged.

⚠ CAUTION

Do not exceed the rated load shown on the jack label. Overloading may cause accelerated wear or failure.

This jack is not intended for highway travel in the vertical position. Never tow the trailer while the jack is supporting a load.

MAINTENANCE

Minimal maintenance is required to keep your tongue jack operating smoothly and looking its best. To protect the finish, keep the jack clean and apply a coat of wax periodically. Lubrication is necessary if the jack begins to feel rough during operation or produces a grinding sound when cranked.

To service the jack:

1. Remove all weight from the jack.
2. Remove the plastic end cap.
3. Remove pin (1) that secures the handle.
4. Carefully remove the bevel gear (2) located on top of the screw.
5. Remove the dowel pin (3) beneath the bevel gear.
6. Carefully remove the inner tube assembly.
 - Do not attempt to remove the screw from the inner tube.

Apply grease thoroughly along the entire screw thread. After lubrication, reassemble the components and apply grease to the bevel gears before reinstalling.
